WO 2004/031131 PCT/US2003/030869

CLAIMS A process for the preparation of lower alkyl 4-cyano-3-hyroxybutyrate (ACHB) 1 1. 2 which process comprises in combination: (a) reacting 3-hydroxy- γ -butyrolactone using a haliding reagent in the 3 presence of an acylating agent in a lower alkanol solvent so as to provide a 4 reaction product comprising lower alkyl 4-halo-3-hydroxybutyrate wherein said 5 6 halo is selected from bromo and iodo and 7 (b) reacting the reaction product from step (a), without isolation or 8 purification, with a source of cyanide ion in a reaction mixture having a pH in the range of 7 to 11 to produce lower alkyl 4-cyano-3-hydroxybutyrate (ACHB) with 9 10 minimal side reaction products. 1 2. The process of claim 1 wherein said haliding reagent in step (a) is selected from 2 the group consisting of hydrogen bromide in solution or gaseous form, hydrogen iodide, acyl halide, trimethylsilyl halide and an alkali metal halide, wherein such 3 4 halide is selected from bromide and iodide. The process of claim 2 wherein said haliding reagent is liquid hydrogen bromide. 1 3. The process of claim 1 wherein said acylating agent in step (a) is selected from the 1 4. 2 group consisting of lower alkanoyl halides, lower alkanoic anhydrides, lower 3 alkyl alkanoates and mixtures thereof. 1 5. The process of claim 4 wherein said acylating agent is acetyl chloride. The process of claim 4 wherein said acylating agent is acetic anhydride. 6. 1 7. The process of claim 4 wherein said acylating agent is ethyl acetate or ethyl 2 formate. The process of claim 1 wherein acetyl bromide serves as said haliding reagent and 1 8. 2 as said acylating agent. The process of claim 1 wherein said source of cyanide ion in step (b) is an alkali 1 9.

2 metal cyanide.

1 10. The process of claim 9 wherein said alkali metal cyanide is sodium cyanide. WO 2004/031131 PCT/US2003/030869

1 11. The process of claim 1 wherein said step (a) and said step (b) are carried out sequentially in a single reaction vessel.

- 1 12. The process of claim 1 wherein said process employs racemic reactants and produces a racemic product.
- 1 13. The process of claim 1 wherein said process employs optically active reactants 2 and produces a optically active product.
- 1 14. The process of claim 13 wherein said process employs reactants having the (S) configuration.
- 1 15. The process of claim 1 wherein said reaction product of step (a) is ethyl 4-bromo-3-hydroxybutyrate (EBHB) and the final product produced is ethyl 4-cyano-3-
- 3 hydroxybutyrate (ECHB).
- 1 16. The process of claim 1 wherein process step (b) is carried out at a pH in the range of 8 to 9.5.
- 1 17. The process of claim 1 wherein process step (b) is carried out in aqueous ethanol.
